About me

Data engineer student, with around 2+ years of experience in web development. My progress in time can be seen on my GitHub account. I specialize on the front-end of software development (websites, desktop and mobileapplications), i also have some experience with databases, servers and building API's (backend), but it's not my forte. I like to see myself as a builder more than just a programmer, understand the full scheme at the time of start a new project, rather than only make some pieces without understanding why it's important for me, i like to understand and predict how the full project will work once all the pices and engines connect.

Education

Universidad Nacional Experimental de Guayana   2022-Now

Data Engineer

Certificates

Responsive web design   2023-04-29

freeCodeCamp

Data structures and algorithms with Javascript   2023-06-27

freeCodeCamp

Frontend development libraries   2024-04-04

freeCodeCamp
